

## Emergency Lighting Automatic Self Test System

The new M3Conec is ideal for medium to large single or multi site installations either as a new or retro-fit solution.

Any self contained Dali emergency lighting unit may be connected to M3Conec via a Dali Gateway. The Gateway is then connected to cloud storage via a traditional wireless interface. Each Gateway is capable of monitoring up to 256 Dali Emergency fittings, over 4 output circuits.

Control wiring between the Dali points to the Gateway is via a 2 core cable.

Access to interrogate and retrieve reports is via a P.C, tablet or smart phone using a free downloadable App.

### Features:

- Automatic testing of emergency lighting
- Unlimited number of Dali emergency lighting points
- Free downloadable App for control and programming test regimes
- Cloud storage of test results with simple access
- Compatible with all Dali emergency lighting products
- Each luminaire provides a failure email if a fault occurs between tests. Email is sent to chosen recipients.
